

Create Custom Reports in RentWorks with Cyberquery® and Take Control of Your Car Rental Business!

"When you fully embrace Cyberquery you gain freedom to report on your data in any way you choose. By doing so you add to the bottom line with an exponential increase in staff productivity. Almost all of your reporting can be automated. And the staff love it because it allows them to focus on the more rewarding aspects of their jobs.

When used for audit purposes, you will gain a depth and breadth to your data you likely didn't know was possible. Cyberquery is fully adaptive and scalable to meet your needs and is easy to use. In conjunction with Rentworks, Cyberquery is the single biggest technology catalyst for positive change we have ever implemented with this organization."

Anoop Chugh
Director of Information Technology,
Hertz/Dollar/Thrifty of Canada

RentWorks includes over 125 standard reports, but if you need custom reports that are more specific to your business, then Cyberquery® is the answer!

Cyberquery makes it easy to access the wealth of data held in RentWorks, letting you put the power of strategic decision making into the hands of key employees at all levels in your organization.

With Cyberquery, authorized employees can quickly and easily obtain the information they need when they need it. And in the format they need it: Cyberquery delivers business intelligence in graphs, reports and spreadsheets distributed by email, paper and via the internet.

Using Cyberquery enables you to access your data to produce and electronically distribute information in a fraction of the time required by conventional programming and other report writers. Cyberquery also has outstanding run-time performance that produces results very quickly, which greatly enhances productivity.

When you require record-by-record detail reports, just specify the data needed and Cyberquery presents the information drawn from one or more databases. You can sort, organize and rearrange information as you desire. Cyberquery automatically optimizes layout and pagination, saving you the effort.

END OF REPORT						

Summary reports provide the information needed for strategic decisions. Through summaries, you can find essential information that empowers more informed business decisions.

Sometimes, information is much more apparent in a graph or chart compared to a table of figures. Cyberquery lets you change the display from a table to a chart and back again with the click of a mouse. And you can easily export information directly into Excel and other spreadsheets for further analysis and presentation.

Cyberquery is very easy to learn and use for the novice, yet sophisticated and powerful enough to meet the needs of the advanced user or programmer.
